

mobile apps

FEATURES

- Collect site performance data
- Plan a new site deployment
- Configurable widgets
- Test network throughput and coverage
- Throughput based analysis
- Instantly attach core location data to results (GPS)
- Test throughput by TCP/UDP and UP/DOWN
- Generate email with results and location data
- Free in the Apple iTunes Store
- Coming Soon for Android on Google Play

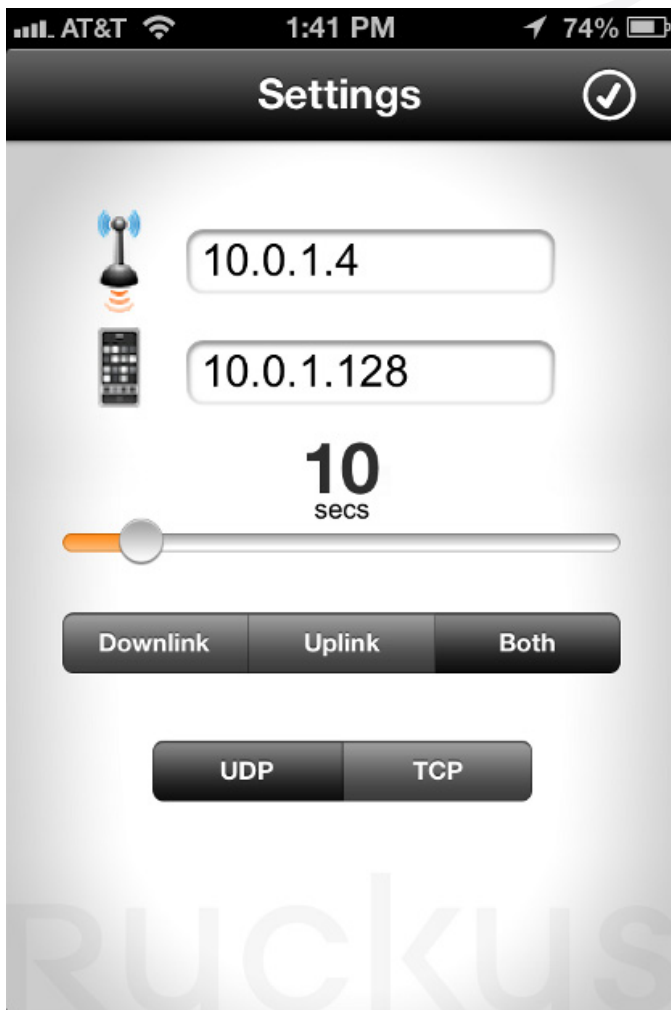

Ruckus SpeedFlex

WIRELESS PERFORMANCE TESTING TOOL

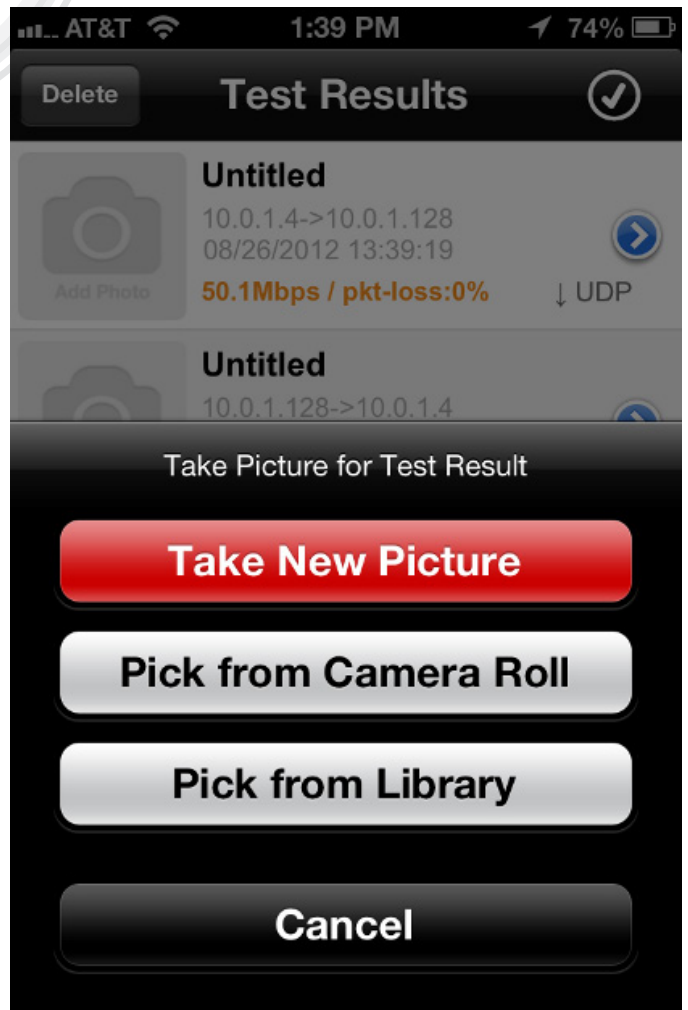

SpeedFlex is a wireless performance testing tool. Based on the open source performance test tool, SpeedFlex, this comprehensive yet easy to use application from Ruckus gives users a simple way to collect site performance data. It can be used to validate the performance of an existing installation, or assist in planning a new site deployment. Simply connect to a SpeedFlex server – such as a Ruckus ZoneFlex AP or ZoneDirector - and you can instantly test network throughput. Easily capture real time throughput, packet loss and site data. Take pictures and send an email with the results packaged in a PDF.

Get real time throughput (TCP/UDP) and packet loss in an easy to use format.

Just set the IP address of your SpeedFlex server, choose your duration and you can begin testing.

You can take a picture to reference where the test was conducted and this will be included in a report you can generate to a customer.
