

data sheet

BENEFITS

USB Backhaul

Support for carrier LTE / 3G backhaul with simple driver provisioning

Dual-band selectable

Dual-band selectable (2.4 GHz or 5 GHz) with a click of a button

High concurrent client capacity

Capable of supporting up to 256 concurrent Wi-Fi clients dependent on backhaul bandwidth

Extended range with transmit beamforming (TxBF)

Increases the signal gain by up to 3 dB and increases client reliability and performance

Advanced feature set maximizes performance/capacity

Integrated airtime fairness and capacity-driven channel selection minimizes interference and maximizes capacity

Unobtrusive lightweight design for fast and easy installation

Ceiling, wall or desktop mountable with integrated mounting features for easy deployment anywhere

Best in class channel selection with ChannelFly™

Capacity-driven channel selection predicts and automatically selects best performing channels based on statistical, real-time capacity analysis of all RF channels

Flexible deployment options

SmartCell™ 200 or controller-based deployment with any Ruckus ZoneDirector

ZoneFlex™ 7321-U

SMART DUAL-BAND SELECTABLE 802.11n ACCESS POINT

Unmatched Price/Performance in a Dual-Band 802.11n Access Point

The ZoneFlex 7321-U is the ideal solution for carrier class Mi-Fi. For service providers who wish to monetize spectrum and for Internet providers, the 7321-U can be quickly and easily deployed in environments where there is limited wired connectivity. Also perfectly suited for transportation deployments, such as trains, busses, boats etc., the 7321-U can leverage LTE/3G mobility to provide seamless Wi-Fi to passengers or employees. The 7321-U is also an ideal solution for retail vendors wishing to back-up their existing PoS systems in cases of WAN failure or downtime as well as many other enterprise vendors with the need for a WAN back-up system.

The Ruckus ZoneFlex 7321-U is a two spatial stream (2x2:2), dual-band selectable access point (AP) that delivers the highest performance at the most competitive price point in the market.

Unlike other APs in its class, ZoneFlex 7321-U supports transmit beamforming (TxBF) to increase signal gain of up to 3 dB.

In an ultra sleek, unobtrusive and lightweight form factor (7 oz. / 198 g.), the ZoneFlex 7321-U supports up to 256 concurrent clients (performance is dependent on backhaul bandwidth).

The ZoneFlex 7321-U comes with a myriad of advanced features that maximizes Wi-Fi performance and capacity including airtime fairness, and capacity-driven auto channel selection (ChannelFly™).

When used with the Ruckus ZoneDirector line of Smart WLAN controllers, the ZoneFlex 7321-U supports the full complement of Smart O/S features such as, guest access, per user thresholds and Dynamic Pre-Shared Keys.

ZoneFlex™ 7321-U

SMART DUAL-BAND SELECTABLE 802.11n ACCESS POINT

Best price/performance of any entry-level AP

The ZoneFlex 7321-U offers the industry's best price/performance of any 2x2:2 entry-level AP in its class, making it ideal for single AP deployments, SMB requirements and emerging countries where high-capacity/value are essential.

ChannelFly for optimal wireless performance

The ZoneFlex 7321-U uniquely supports an innovative approach to automatic channel selection called ChannelFly. A capacity-driven approach to auto channel selection based on observed channel traffic, ChannelFly uses statistic modeling to learn and select the best performing RF channel. It relies on actual capacity on all channels across both 2.4 and 5 GHz frequencies to automatically move clients (using 802.11h) to a better channel with less interference and more capacity.

Simplified user security with Dynamic PSK

With the ZoneDirector, the ZoneFlex 7321-U radically simplifies Wi-Fi security for users and IT administrators through the use of Dynamic Pre-Shared Keys. Once users successfully authenticate, a unique pre-shared encryption key is generated and automatically installed on the user's device — along with the requisite SSID. This eliminates the tedious configuration of wireless settings and eases the burden of installing the same PSK (that could be easily compromised) on every user device.

Differentiated services with multiple SSIDs

Up to 8 discrete SSIDs are supported within the Ruckus ZoneFlex 7321-U, each with unique broadcast, QoS, security and management parameters. Up to 2,048 discrete WLANs can be created and mapped to the same or different AP or VLAN. This lets hot-zone operators easily offer tiered services to different users or traffic types. Enterprises can use this feature to differentiate guest, contractor and employee access policies or to segment different traffic types.

Advanced WLAN applications with Smart/OS

With the Ruckus ZoneDirector Smart WLAN controller, the ZoneFlex 7321-U supports a wide range of value-added applications such as guest networking, Smart Wireless Meshing, Dynamic PSK, hotspot authentication, wireless intrusion prevention and many more. WLANs can be grouped and shared by specific APs. In a centrally managed configuration, the ZoneFlex 7321-U works with a variety of authentication servers such as AD, LDAP, and RADIUS.

High performance hot spots

The 7321-U uniquely supports the WISPr protocol to provide universal authentication method or UAM (browser-based login at a captive portal), walled garden, time-based user session control, and additional RADIUS attributes for hotspot service settings.

Auto Recovery AP reboots if disconnected from ZoneDirector for more than

Access Point USB Software Packages

This table lists supported Access Point USB Software Packages. Click Browse to add an Access Point USB Software Package.

USB Device	VID	PID	Version	Actions

Import a new USB Software Package

As part of a centrally controlled wireless LAN, the ZoneFlex 7321-U is managed through an highly intuitive and simply to use graphical, point-and-click Web interface. The dashboard gives administrators a single and comprehensive view of the state of the wireless LAN. Above is a snapshot of the simple USB provisioning capability.

ZoneFlex™ 7321-U

SMART DUAL-BAND SELECTABLE 802.11n ACCESS POINT

FEATURES

- USB backhaul with simple push provisioning for drivers
- Transmit beamforming for extended range
- Single radio with selectable 2.4 GHz or 5 GHz option for maximum flexibility
- Airtime fairness to optimize capacity and performance
- ChannelFly - advanced channel selection and interference mitigation
- Managed via SmartCell™ 200 or ZoneDirector
- Standard 802.3 af Power over Ethernet (PoE)
- Unobtrusive design with integrated mounting
- Eight BSSIDs with unique QoS and security policies
- Advanced QoS packet classification and automatic priority for latency sensitive traffic
- Limited lifetime warranty

- *Dynamic, per-user rate-limiting for hotspot WLANs**
- *WEP, WPA-PSK (AES), 802.1X support for RADIUS and Active Directory**
- *Zero-IT and Dynamic PSK**
- *Admission control / client load balancing**
- *Captive portal and guest accounts**

*when used with Ruckus ZoneDirector controller

Purchased Spectrum: 3G/LTE/WiMax

Monetize Carrier or Mobile Operator's Spectrum

Use Cases: Redundancy for Retail, Restaurant, Business, Hot Spot, Kiosk, for LAN backup and Temporary Networks

PLEASE NOTE: The 7321-U is a carrier specific product that requires customization for the USB driver. As such, minimum quantities of 1,000 units are required for purchase.

Product Ordering Information

MODEL	DESCRIPTION
ZoneFlex 7321-U 802.11n Smart Wi-Fi Access Point	
901-7321-XX01	Single-port centrally managed AP, no power adapter. Includes USB port for mobile network backhaul.
Optional Accessories	
902-0162-XXYY	PoE injector (264 VAC 47-63 Hz)
902-0173-XX10	Power Supply (264 VAC 47-63 Hz)

PLEASE NOTE: When ordering ZoneFlex Indoor APs, you must specify the destination region by indicating -US, -IL, or -WW instead of XX. When ordering PoE injectors or power supplies, you must specify the destination region by indicating -US, -EU, -AU, -BR, -CN, -IN, -JP, -KR, -SA, -UK, or -UN instead of -XX.
