

AT-A-GLANCE

CLOUD WI-FI IS COMPRISED OF:

- An all-inclusive subscription package
- A large selection of compatible access points (APs)

CHOOSE FROM THE FOLLOWING SUBSCRIPTION OPTIONS:

- 1-year
- 3-year
- 5-year

CLOUD WI-FI SUBSCRIPTION INCLUDES:

- AP management
- Reporting and analytics
- 24x7 phone / chat / web support

KEEPING PACE WITH WLAN GROWTH

The future is certain: demand for Wi-Fi services will continue to skyrocket. More users, more types of connected devices, and more bandwidth-intensive applications.

Your management infrastructure needs to keep pace with all of these changes. But as you add more on-premises WLAN controllers, the strain on IT staff also grows. So you may have to throttle back on Wi-Fi projects. Or, better yet, find a more efficient way of managing your distributed Wi-Fi networks.

Ruckus Cloud Wi-Fi eliminates the need for on-premises controllers, moving WLAN management to the cloud. Your WLAN administrators—working from anywhere—can view and manage your multi-site wireless network. This includes everyday tasks, like monitoring and adding APs, as well as advanced network configuration.

The web interface presents a single-pane-of-glass view of all your WLANs. Administrators can also use the Ruckus full-featured mobile app to keep up with management tasks even when they're on the move.

STREAMLINE WITH SIMPLIFIED MANAGEMENT

WLAN management simplicity is a long-standing strength of Ruckus Wireless. Just as you should expect, our Cloud Wi-Fi service takes the complexity out of deploying and managing a distributed wireless network. You can allocate fewer IT resources to WLAN administration, without compromising Wi-Fi performance or limiting growth. With streamlined workflows for day-to-day tasks, you actually accelerate your response to user and organizational needs.

- Highly manual tasks—like registering new APs—require just a few steps (or, using your mobile phone, a quick barcode scan)
- Normally complex tasks—like setting up guest networks—are wizard-guided and take only a few minutes

You get simplified management. Your users get responsive IT support. And your organization continues to benefit from fast, dependable Wi-Fi, thanks to the unbeatable performance of Ruckus APs.

GUEST NETWORKS AT YOUR SERVICE.

Guest networks to support customers and temporary visitors are invaluable for any organization. It should be easy to set up, secure, and modify guest networks on the fly. At least that's what Ruckus believes. Which is why we designed our Cloud Wi-Fi platform to make guest network management simple. No special programming. No high-end IT resources required.

With Ruckus Cloud Wi-Fi, your WLAN administrator can create a guest network in minutes, using our setup wizard. Have your guests receive login credentials via SMS or email. Or allow them to use their own social login credentials so you don't even need to issue passwords. Add branding elements to your Wi-Fi login portal—like your logo, images and messages—and update them as often as you want.

TOP PERFORMANCE WITH LOW COST OF OWNERSHIP

It's a safe bet that Wi-Fi usage will continue to climb. So it makes better economic sense to choose high performance, high density APs that also lower your total cost of ownership:

Higher capacity per AP: Ruckus APs can support 30-50% more clients than competitive products without a performance penalty. More capacity per AP saves on buying additional APs, plus the associated subscription fees, installation costs and other overhead.

Better throughput and coverage: Our patented RF technologies overcome the signal degradation, noise and interference that disrupt service (and make users unhappy). The result is better throughput and coverage per AP. So you can provide fast and reliable Wi-Fi for everyone without over-provisioning APs.

YOUR AP INVESTMENT IS SAFE

Ruckus Cloud Wi-Fi works with the latest Ruckus 802.11ac APs for indoor and outdoor installations. With Ruckus, you also have the flexibility of migrating from one management architecture—virtual controller, appliance-based controller, controller-less, or cloud—to another (or a hybrid deployment) without losing the use of your APs. It's our job to support the future you choose. Not choose it for you.

WIDE RANGE OF SUPPORTED APs

See <http://www.ruckuswireless.com/cloud-devices> for list of supported access points.

TRY CLOUD WI-FI FREE FOR 60 DAYS

- No obligation free 60 day trial
- Phone, email and chat support
- One free 802.11ac (for qualified applicants)
- No credit card required
